RICE CREEK CHAIN OF LAKES
PARK RESERVE

PARK ACTIVITIES
- Beach
- Biking
- Boat Launch
- Camping
- Canoeing
- Chomonix Golf Course
- Compost Site
- Cross Country Skiing
- Fishing
- Geocaching
- Walking
- Picnic Pavilions
- Playground
- Wargo Nature Center

UNIQUE HABITATS:
- Wetlands
- Upland Oak Forests
- Mesic & Dry Prairie Restorations

NATURAL RESOURCES AND WILDLIFE

AMERICAN WHITE PELICAN They can often be seen in large flocks off the dock on George Watch Lake at Wargo Nature Center, especially in the spring and early fall.

SUGAR MAPLE This native tree often shows up with the American Basswood, in Maple Basswood forests. Known for producing high-sugar sap and displaying stunning fall colors, it is able to survive as a small sapling in intense forest shade until tall enough to receive more sunlight and grow rapidly.

FALSE RUE ANEMONE This spring wildflower blankets the forest floor with its small white flowers in early spring. Like many woodland wildflowers it blooms only for a short period of time (ephemeral) before it is shaded out by the leaves of trees. It can occasionally be found reblooming in the fall.

BLADDERWORT A fairly common carnivorous aquatic plant. They consume their prey by bladder traps which is recognized as one of the most sophisticated structures in the plant kingdom.
